

Note on the demo mode

Special demo mode

This ekey fingerprint scanner is designed for use at trade fairs and in showrooms. The special firmware of the demo mode allows any finger to trigger the opening impulse without prior storage. This makes it even easier for visitors to experience the benefits of keyless access!

The devices are immediately ready for use and do not require any Internet or WLAN connection, which is often problematic, especially at trade fairs. The demo mode is enabled for 15 hours from the moment it is supplied with power and is automatically disabled after this period of time. Then the light ring will flash blue. Reapplying power will enable the demo mode again for 15 hours.

Transition to serial operation

A later transition of the fingerprint scanner to serial operation is also possible. This is done by activating the device via the ekey bionyx app. This will permanently disable the demo mode.
